Monday, December 13, 2021 3:23 PM

## INDENTATION

The indentation or indentation level refers to the spaces at the start of a line of code. In Python, indentation is used to indicate code blocks.

The following example shows the correct indentation level:

```
In [14]: if 5 > 2:
         print("Five is greater than two")
```

Out[10]: Five is greater than two

The following example show the incorrect indentation level which raises a syntax error in the output terminal:

```
In [15]: if 5 > 2:
         print("Five is greater than two")
```

Out[10]: File "C:\Users\Joe\AppData\Local\Temp\ipykernel\_3716\4267780824.py", line 2  
 print("Five is greater than two")  
 ^

IndentationError: expected an indented block
